

Operations Memo No. 6

VA COOPERATIVE STUDIES PROGRAM # 424

Clinical Outcomes Utilizing Revascularization and Aggressive DruG Evaluation

Date: 7/6/1999

From: Pamela Hartigan, Study Statistician, CSPCC West Haven

Subj: New guidelines for control in diabetics

To: Study Personnel

Thru: Trial Leadership

New guidelines have been published outlining diabetic control. We will adopt them in COURAGE.

Our new goal for diabetic control is HbA1c<7.0%.

The diabetic patient whose HbA1c exceeds 7.0% at any time during the study should be referred to his/her primary care physician for evaluation.
